Dengue across Colombia

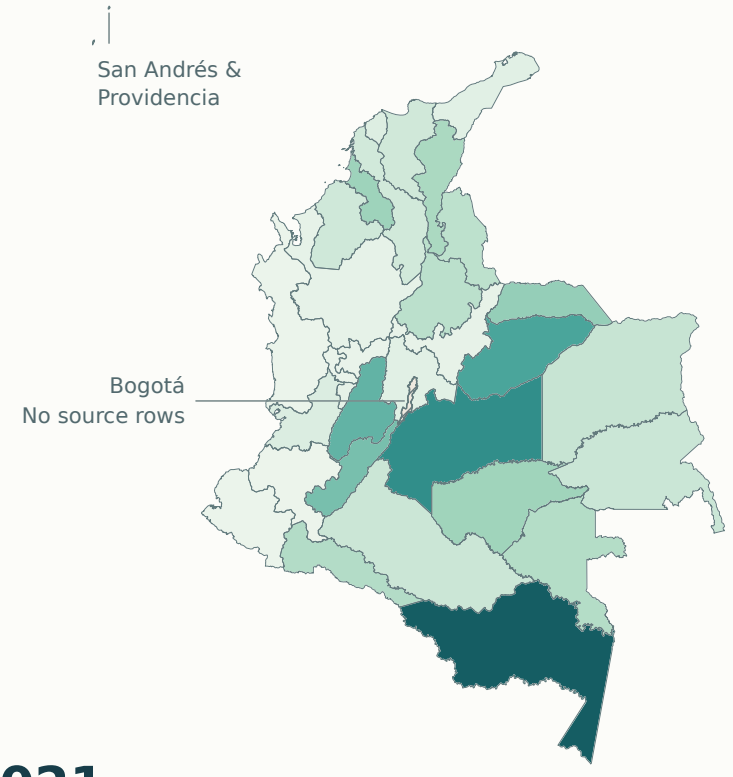

Four surveillance years, one shared color scale

INS event 210 · Annual recorded cases per 100,000 total residents · 2019–2022

A 2019

122,992 recorded cases

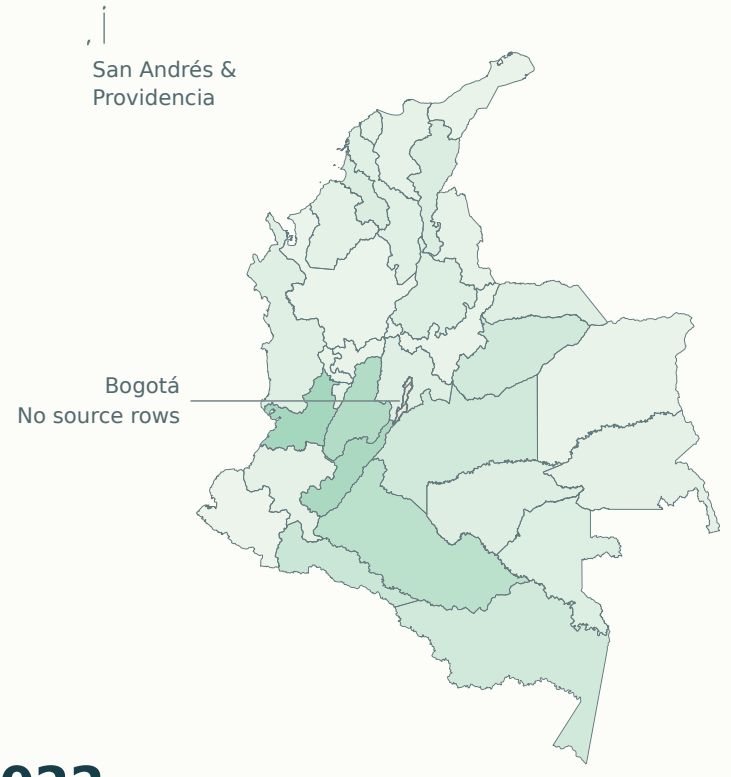

Source rows: 1,593/1,716 department-weeks
7 units have partial weeks; 1 has no rows

B 2020

76,220 recorded cases

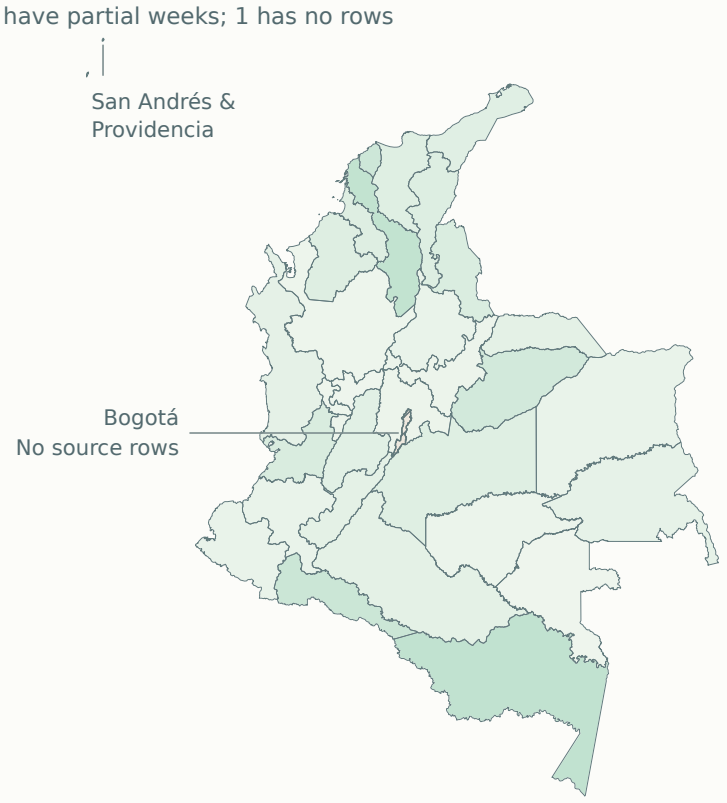

Source rows: 1,552/1,749 department-weeks
11 units have partial weeks; 1 has no rows

C 2021

49,174 recorded cases

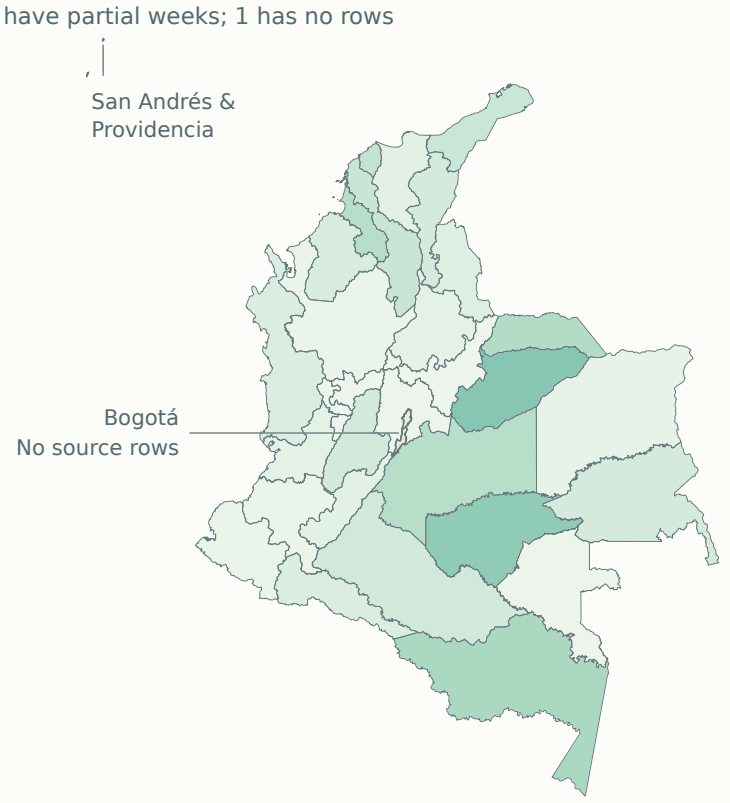

Source rows: 1,502/1,716 department-weeks
11 units have partial weeks; 1 has no rows

D 2022

65,428 recorded cases

Source rows: 1,531/1,716 department-weeks
10 units have partial weeks; 1 has no rows

Recorded cases per 100,000 total residents

Same linear scale in every panel

Lighter = lower recorded rate

No source rows (Bogotá); not a zero

Rates use the sum of available weeks ÷ that year's DANE population × 100,000. Partial source rows can lower the recorded totals.
Row availability is not reporting completeness. These are descriptive normalized records, not official incidence in a population at risk.
